X-PACK

Goes Where Other Filters Won't

ANYWATER ANYWHERE

X-Pack™

Trusted During Hurricane Katrina

The X-Pack provides up to 55 liters of clean drink from nearly any surface water source over a ten day period. Use nearly any water source to generate clear drink. Purity levels are comparable to reverse osmosis systems, and the filter meets EPA standards for the removal of biological pathogens (viruses, bacteria, cysts). Used by soldiers to drink the floodwaters in New Orleans, you can trust the X-Pack to provide safe and simple filtration wherever you are.

How It Works:

The X-Pack is simple enough for a child to use. Just put dirty water into the red port, and one sports syrup charge into the green port. That's it. The water will be filtered by the advanced forward osmosis membrane as it is drawn into the X-Pack's inner chamber. When the process is complete, simply pour the clean drink out and restart the system.

No purifying chemicals are required, nor is any power input needed other than the sports drink syrup charges that drive the filtration process by osmosis. The X-Pack will reduce water logistics by a factor of 15, and provide safe, hassle-free fluids from even muddy sources without clogging.

Benefits:

- ★ The highest purity levels of any personal water filter
- ★ Non clogging filter means expanded water source options
- ★ Dilute sports drink enhances hydration and improves user performance
- ★ Reduces your water logistics burden by a factor of 15

System Specifications:

Volume:	1.8 L
Filter life:	10 days
Filter output:	1 liter in 4 hours at 20 C
User effort:	seconds to fill, no work required for filtering
